Supplementary Figure 1. Comparison of disease-free survivals (DFS) and overall survivals (OS) according to cyclooxygenase 2 (COX-2) expressions in the luminal type cancers, the luminal A type and the luminal B type cancers. Shortened DFS in COX-2 negative luminal type cancers (p = 0.026) (A), but no significant differences of OS according to COX-2 expressions (B) are noted. There were no significant differences of DFS and OS according to COX-2 expression in the luminal A type cancers (C, D) and the luminal B type cancers (E, F).
